SEGMENT: DTM Date/time/period

STATUS: Conditional

REPEAT: 10

- FUNCTION: To specify date, and/or time, or period.
- CLARIFICATION: Date/time/period related to the whole message. The DTM segment must be specified at least once to identify the Despatch Advice date.

COMMENT: At least one DTM is required for the Delivery Ticket Date. Conditionally DTMs can be sent if the Delivery Start or Stop Dates differ from the Delivery Ticket Date.

GROUP: 1 RFF

STATUS: Conditional

REPEAT: 10

FUNCTION: A group of segments giving references where necessary, their dates relating to the whole message, e.g. contract number.

SEGMENT: RFF Reference

STATUS: Mandatory

REPEAT: 1

FUNCTION: To specify a reference.

CLARIFICATION: A segment for referencing documents relating to the whole despatch advice message, e.g. purchase orders, delivery instructions, import/export license.

COMMENT: Reference segments are used to transmit information on various parameters related to the delivery of fuel or service. Some references can stand alone, others should be paired with the DTM segment for clarity (Segment Group 1).

| GROUP: | 2 | NAD |

STATUS: Conditional

REPEAT: 10

FUNCTION: A group of segments identifying names, addresses, locations, and required supporting documents relevant to the whole Despatch Advice.

SEGMENT: NAD Name and address

STATUS: Mandatory

REPEAT: 1

FUNCTION: To specify the name/address and their related function, either by CO82 only and/or unstructured by CO58 or structured by CO80 thru 3207.

CLARIFICATION: A segment for identifying names, addresses, and their functions relevant to the whole Despatch Advice. Identification of the parties involved is recommended for the Despatch Advice message, and is to be given in the NAD segment.

> It is recommended that where possible, only the coded form of the party ID should be specified, e.g. the buyer and seller are known to each other, thus only the coded ID is required. The consignee or delivery address may vary and would have to be clearly specified, preferably in structured format.

COMMENT: At least two NAD segments must be included for every Delivery Ticket, Product/Service Deliverer and Product/Service Receiver. Additional parties to the delivery are also transmitted in NAD segments. Parties can be identified by name (text on codified), by IATA Carrier Code or by DUNS Number.

SEGMENT: MEA **Measurements**

GROUP: 11-CPS/PAC

STATUS: Conditional

REPEAT: 10

- FUNCTION: To specify physical measurements, including dimension tolerances, weights and counts.
- CLARIFICATION: A segment specifying physical measurements of the packages/physical units described in the PAC segment.
 - COMMENT: This MEA will only be used in conjunction with the preceding PAC and will only be used in that case. It is required for packaged products.

|----------------|---|
| GROUP: | 15-CPS/LIN |
| STATUS: | Conditional |
| REPEAT: | 10 |
| FUNCTION: | To specify physical measurements, including dimension tolerances, weights and counts. |
| CLARIFICATION: | A segment specifying physical measurements of the despatched item in original or unpacked form. |
| COMMENT: | Must be used for fuel delivery. |
| | The purpose of the delivery ticket is to provide information on the provision of fuel or other services to an aircraft, ground equipment, etc. Several different fuel delivery methods are possible and each requires slightly different information and ways of handling that information. A delivery of fuel will always include the gross |

measure of the quantity delivered, Measured Quantity Delivered. This quantity can be arrived at through different processes; a continuous reading meter will result in a meter start and meter ending reading, the difference being the quantity delivered. A meter which is reset to zero after each delivery will provide only one reading. Some meters contain a sequence counter and these readings are referenced. For any meter reading there will be a unit of measure reference. All tickets for a fuel delivery will contain a gross quantity delivered amount, they may optionally include adjustment factors and an adjustment net quantity amount. All these data elements are accommodated through the use of one or more MEA segments. If the ticket is for a delivery at least one MEA will be used. Occasionally a reference to a specific meter is required; this meter reference is contained in an **RFF** segment.
