

# From uncertainty to imPACT: Scope 3 with PACT and PIDX

Beth Hadley, Manager WBCSD

[hadley@wbcSD.org](mailto:hadley@wbcSD.org)

# The Partnership for Carbon Transparency (PACT) is supporting organizations in taking credible decarbonization action across supply chains and measuring progress

## What we do

Developing **the global standard** for calculating and exchanging **consistent, comparable and credible Scope 3 emissions data** across value chains, allowing organizations to **take carbon-informed decisions**

## How we do it

**1** Harmonization of emissions accounting for products

*Calculation methodology endorsed by 50+ organizations and in implementation*

**2** Standardization of data exchange across value chains

*Data exchange specifications enabling connection between tech solutions*

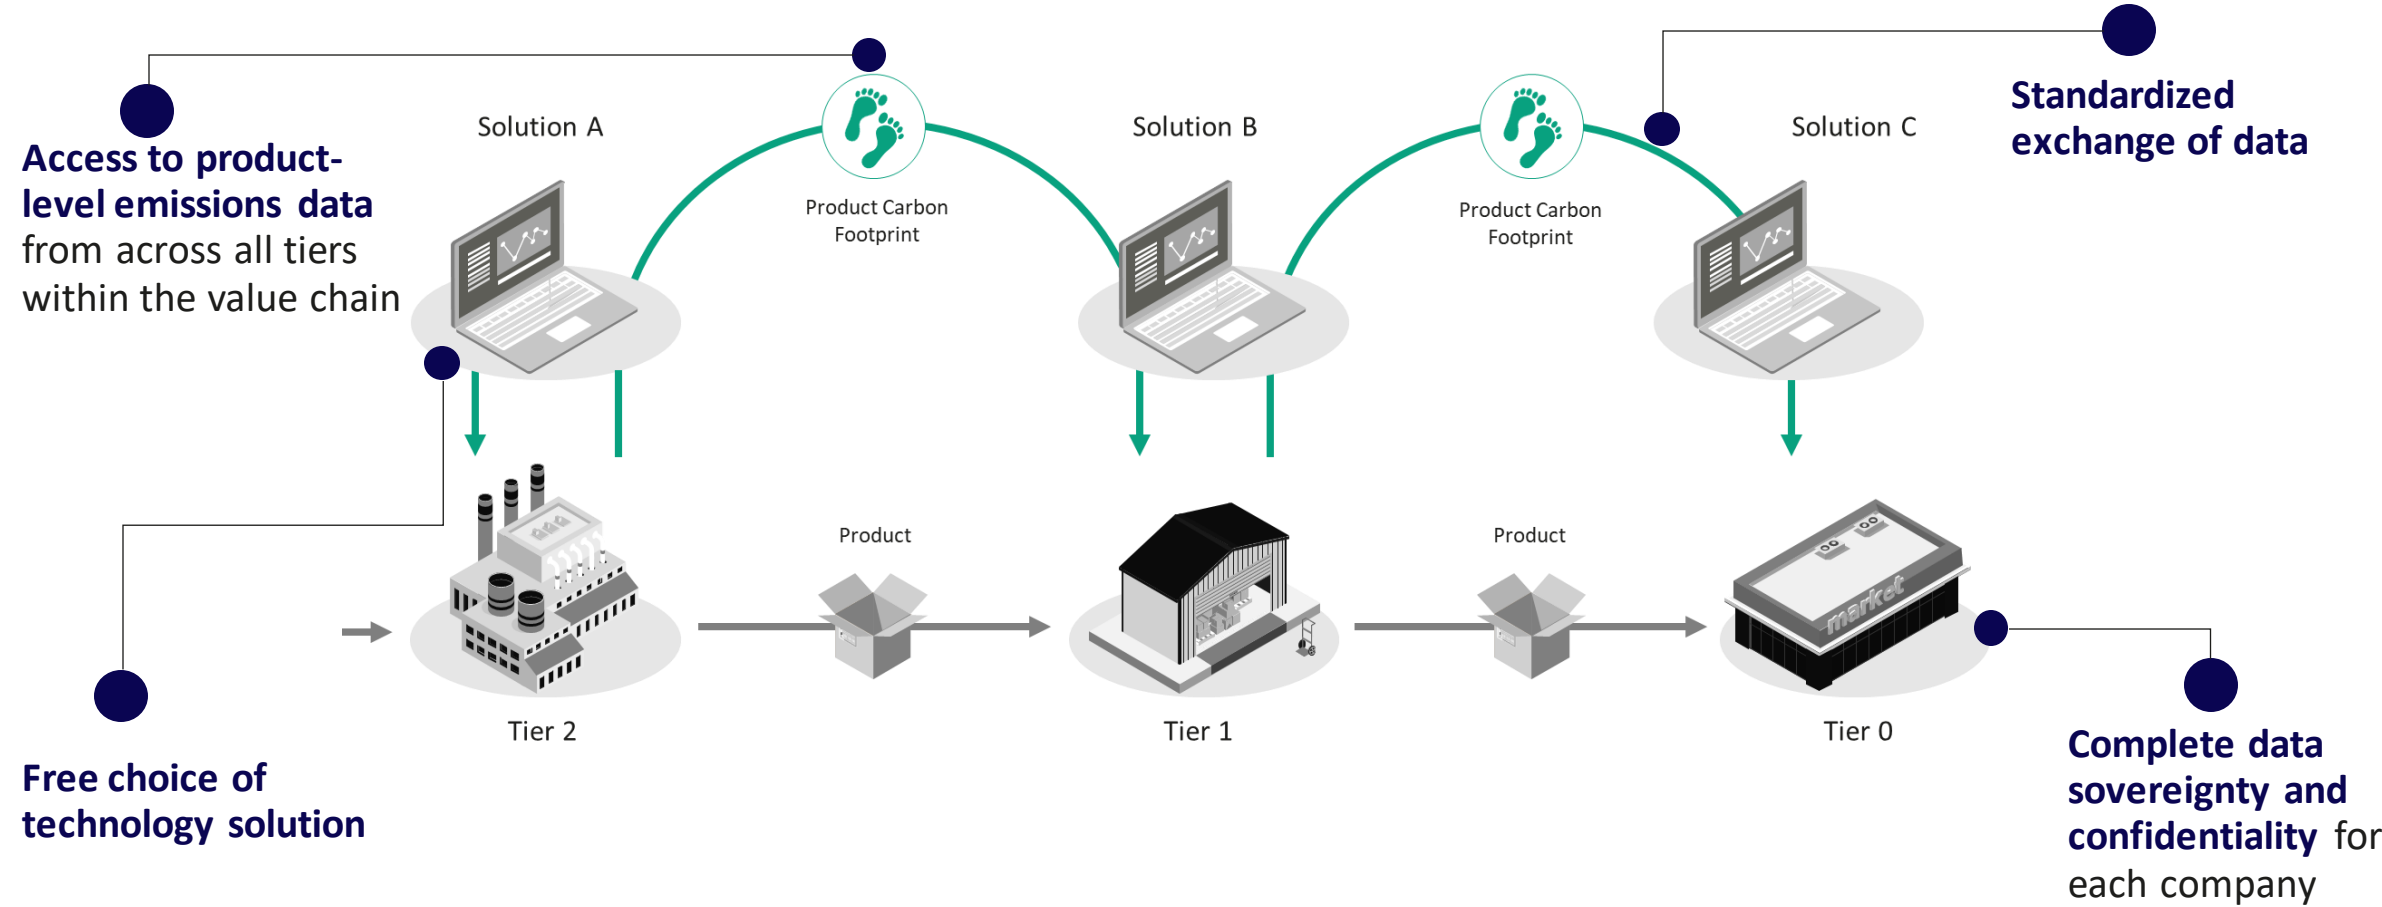

**3** Driving collaboration across entire ecosystem

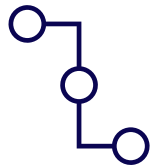

*150+ stakeholders and industry initiatives representing 2,500 companies involved*

In practice, PACT enables the interoperable exchange of GHG data across value chains, equipping companies with a robust baseline for decarbonization

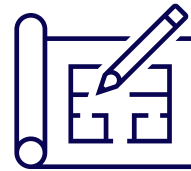

Carbon transparency is a collaborative journey, join the movement today!

## Commit to value chain transparency

---

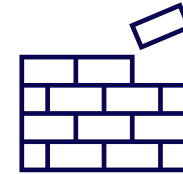

Join the movement, request emissions transparency from your suppliers and share with your customers

## Build and leverage technology

---

Implement systems that facilitate emissions transparency, leverage PACT Conformant Solutions to enable interoperability

## Evolve the standards

---

Join PACT & PIDX to evolve the standard, both methodologically and technologically

**PACT**
