

## Petroleum Data Exchange Batch (f/d/a Petroex) Version 3

### Bill of Lading Types A & B

Approved by the Downstream E-Business Subcommittee

In the past, the term PETROEX has been used both generically to refer to the batch bill-of-lading record layouts and as a proprietary application name by GE Global Exchange Services. With other vendors now participating in batch bill-of-lading data transfers, a decision was made by the Downstream E-Business Subcommittee to eliminate the confusion by creating a new generic name for the batch bill-of-lading record layouts. The new generic name for the batch bill-of-lading record layouts is Petroleum Data Exchange Batch or the abbreviation PDXB.

Questions concerning this document can be emailed to Kathy Mason, Marathon Ashland Petroleum Company, at [KEMason@MAPLLC.com](mailto:KEMason@MAPLLC.com). Depending on the volume and the nature of the questions, some emails may be distributed to other task force members to provide a response.

As the new PDXB bills of lading will contain more data than in the original version of PDXB, the bill of lading record is being split into two records, a Type A Record and a Type B Record. The new records will be keyed or tied together with the Company Code, SPLC and the bill of lading number. For each Company Code, SPLC, BOL Number combination, there will be one Type A Record for the entire load and an individual Type B Record for each product.

AN indicators in the length column describe usage of the field, not necessarily the acceptable values. A numeric field would drop any leading zeroes while an alpha-numeric field would not. Some fields are defined as alpha-numeric with only numeric values accepted. **M** = mandatory field, **O** = optional field.

#### Type A Record:

| Ref # | Field Name  | Cols         | Length | Description                                                                                                                                                   |
|-------|-------------|--------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | System      | 1 <b>M</b>   | 1 AN   | Name of the system, P=PDXB.                                                                                                                                   |
| 2     | Version     | 2-3 <b>M</b> | 2 AN   | Numeric version of the system.<br>„01“ = version 1, 69 column old format<br>„02“ = version 2, 80 column old format<br>'03' = version 3, new A,B record format |
| 3     | Record Type | 4 <b>M</b>   | 1 AN   | An alpha-numeric code used to identify and separate different PDXB formats. (A for Type A Records.)                                                           |

|    |                         |                |       |                                                                                                                                                                                                                           |
|----|-------------------------|----------------|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4  | Company Code            | 5-7 <b>M</b>   | 3 AN  | An alpha-numeric field used to identify the sending/receiving company. Sending companies input the receiver's code and receivers get sender's code. While the version bridge exists, only 2 character codes will be used. |
| 5  | SPLC Code               | 8-16 <b>M</b>  | 9 N   | A numeric field used to identify the physical location of the terminal from which the product was withdrawn. Use 000 as the default SPLC extension.                                                                       |
| 6  | TERMINAL CONTROL NUMBER | 17-25 <b>M</b> | 9 AN  | An alpha-numeric field identifying the Internal Revenue Service's Terminal Control Number. (Use "NON-IRS" if not applicable such as for an asphalt terminal or refinery)                                                  |
| 7  | BOL Number              | 26-41 <b>M</b> | 16 AN | An alpha-numeric field, which contains the bill of lading, number. Right justify and fill with leading zeros.                                                                                                             |
| 8  | Blank                   | 42-49 <b>M</b> | 8     |                                                                                                                                                                                                                           |
| 9  | Start Load Date         | 50-57 <b>M</b> | 8 N   | The date that the load commenced formatted MMDDYYYY. (Year 2000 compatible)                                                                                                                                               |
| 10 | Start Load Time         | 58-61 <b>M</b> | 4 N   | The time of day (terminal's local time) that the load commenced, formatted (HHMM) based on the 24-hour clock (00:00 - 23:59).                                                                                             |
| 11 | End Load Date           | 62-69 <b>M</b> | 8 N   | The date of load completion, formatted MMDDYYYY (year 2000 compatible).                                                                                                                                                   |
| 12 | End Load Time           | 70-73 <b>M</b> | 4 N   | The time of day (terminal's local time) that the load completed, formatted (HHMM) based on the 24-hour clock (00:00 - 23:59).                                                                                             |
| 13 | Consignee Number        | 74-87 <b>M</b> | 14 AN | An alpha-numeric field which identifies the consignee as it appears on the BOL.                                                                                                                                           |

|    |                         |                  |       |                                                                                                                                                                                                                                                                                     |
|----|-------------------------|------------------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14 | Destination State Code  | 88-89 <b>M</b>   | 2 N   | Numeric code to identify the destination state. (FIPS). Codes can be obtained from <a href="http://www.itl.nist.gov/fipspubs/55new/">www.itl.nist.gov/fipspubs/55new/</a> or <a href="http://www.epa.gov/enviro/html/codes/state.html">www.epa.gov/enviro/html/codes/state.html</a> |
| 15 | Destination County Code | 90-92 <b>M</b>   | 3 N   | Numeric code to identify the destination county. (FIPS)                                                                                                                                                                                                                             |
| 16 | Destination City Code   | 93-97 <b>M</b>   | 5 N   | Numeric code to identify the destination city. (FIPS)                                                                                                                                                                                                                               |
| 17 | Carrier Code            | 98-101 <b>M</b>  | 4 AN  | Alpha-numeric field containing the Standard Carrier Alpha Code (SCAC) to identify the carrier. The SCAC codes are maintained and distributed by the National Motor Freight Traffic Association as Continental Directory NMF101.                                                     |
| 18 | Carrier FEIN            | 102-111 <b>M</b> | 10 AN | Carrier's Federal Employer Identification Number. Use 9 digit FEIN followed by the letter F. If the carrier does not have a FEIN, use the carrier's Social Security Number followed by the letter S. If unknown, use 000000000U.                                                    |
| 19 | Vehicle Number          | 112-121 <b>O</b> | 10 AN | This is used when the supplying company's own vehicles are used, otherwise it should be set to blanks.                                                                                                                                                                              |
| 20 | Vehicle Type            | 122 <b>M</b>     | 1 AN  | Type of vehicle used:<br>B = Barge, D = Dray Truck, P = Pipeline, R = Rail, S = Vessel / Tanker, T = Tank Truck, X = Book Transfer                                                                                                                                                  |
| 21 | Third Party             | 123-125 <b>O</b> | 3 AN  | To generate a Third Party record, insert a valid PDXB Company Code in this field. While the version bridge exists, only 2 character codes will be used.<br>Example: <b>ZZ</b>                                                                                                       |

|    |                       |                     |          |                                                                                                                                                                                                                                                                     |
|----|-----------------------|---------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22 | Purchase Order Number | 126-155<br><b>O</b> | 30 AN    | An alpha-numeric field containing the purchase order number.                                                                                                                                                                                                        |
| 23 | Release Number        | 156-165<br><b>O</b> | 10 AN    | An alpha-numeric field containing the release number.                                                                                                                                                                                                               |
| 24 | Split Load Flag       | 166 <b>O</b>        | 1 AN     | A split load indicates instances where compartments on the same truck are loaded from different lanes at a terminal requiring the driver to card in and card out as he moves from lane to lane to complete a load. Y indicates split load. Leave blank if not used. |
| 25 | Time Zone             | 167-169<br><b>M</b> | 3 AN (I) | Terminal Location Time Zone offset from Eastern Time, i.e., a terminal located in Denver, CO(MT) would have a value of „02-'. Minus sign will follow the number.                                                                                                    |
| 26 | Shipper Info          | 170-179<br><b>O</b> | 10 AN    | Various shipper defined information.                                                                                                                                                                                                                                |
|    | TOTAL                 |                     | 179      |                                                                                                                                                                                                                                                                     |

### Type B Record:

| Ref # | Field Name   | Cols         | Length | Description                                                                                                                                                                                                               |
|-------|--------------|--------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27    | System       | 1 <b>M</b>   | 1 AN   | Name of the system, P=PDXB.                                                                                                                                                                                               |
| 28    | Version      | 2-3 <b>M</b> | 2 AN   | Numeric version of the system. '03' = version 3.                                                                                                                                                                          |
| 29    | Record Type  | 4 <b>M</b>   | 1 AN   | A alpha-numeric code used to identify and separate different PDXB formats. (B for Type B Records.                                                                                                                         |
| 30    | Company Code | 5-7 <b>M</b> | 3 AN   | An alpha-numeric field used to identify the sending/receiving company. Sending companies input the receiver's code and receivers get sender's code. While the version bridge exists, only 2 character codes will be used. |

|    |                         |                |       |                                                                                                                                                                                                                                                                                                     |
|----|-------------------------|----------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    | SPLC Code               | 8-16 <b>M</b>  | 9 N   | A numeric field used to identify the physical location of the terminal from which the product was withdrawn                                                                                                                                                                                         |
| 31 | TERMINAL CONTROL NUMBER | 17-25 <b>M</b> | 9 AN  | An alpha-numeric field identifying the Internal Revenue Service's Terminal Control Number. (Use "NON-IRS" if not applicable such as for an asphalt terminal or refinery)                                                                                                                            |
| 32 | BOL Number              | 26-41 <b>M</b> | 16 AN | An alpha-numeric field, which contains the bill of lading, number. Right justify and fill with leading zeros.                                                                                                                                                                                       |
| 33 | Blank                   | 42-49 <b>M</b> | 8     |                                                                                                                                                                                                                                                                                                     |
| 34 | Component Product Code  | 50-52 <b>M</b> | 3 AN  | A code which identifies the component product loaded. Codes used are the Oil Industry Common Product Codes. The codes are maintained and available from the Downstream E-Business Subcommittee.                                                                                                     |
| 35 | Finished Product Code   | 53-55 <b>M</b> | 3 AN  | A code which identifies the finished product loaded. <b>(If there was no blending, the Component and Finished Product Codes should be the same code.)</b> Codes used are the Oil Industry Common Product Codes. The codes are maintained and available from the Downstream E-Business Subcommittee. |
| 36 | Gross Quantity          | 56-65 <b>M</b> | 10 N  | A numeric un-signed field which represents the gross (metered) quantity of product loaded. Front fill with zeroes. Last 2 positions are implied decimal points (ex. 1453 gallons would be represented as 0000145300).                                                                               |

|    |                                       |         |      |                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----|---------------------------------------|---------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 37 | Gross Credit Sign                     | 66 M    | 1 AN | If the Gross Quantity is negative, enter a minus '-' sign. Leave blank if positive.                                                                                                                                                                                                                                                                                                                                                 |
| 38 | Net Quantity or Temperature / Gravity | 67-76 M | 10 N | A numeric un-signed field which either represents the net (adj. To 60 degrees) quantity of product loaded (front filled with zeroes) or the Fahrenheit temperature and PIDX gravity of the product in the form TTTTGGGG preceded by 2 zeroes. Temperature and gravity each have one implied decimal point. For net quantity, the last 2 positions are implied decimal points (ex. 1453 gallons would be represented as 0000145300). |
| 39 | Net Credit Sign                       | 77 M    | 1 AN | If the Net Quantity or Temperature / Gravity is negative, enter a minus '-' sign. Leave blank if positive.                                                                                                                                                                                                                                                                                                                          |
| 40 | Blend Or Alteration Indicator         | 78 M    | 1 AN | A code which indicates that there has been some modification to the product.<br>0 = No blend or alteration<br>1 = Truck blended with another product<br>2 = Contains additive<br>3 = Blended and contains additive<br>4 = Contains detergent additive<br>5 = Blended and contains detergent additive<br>6 = 24 hour blend<br>7 = Contains IVD detergent additive                                                                    |
| 41 | Measurement Type                      | 79 M    | 1 AN | Indicator defining the measurement used:<br>G = Gallons                      L = Liters<br>B = Barrels                      C = Cubic<br>Centimeters<br>P = Pounds<br>T=Thousandths                                                                                                                                                                                                                                                 |

|    |                        |      |     |                                                                                                                                                                                                         |
|----|------------------------|------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 42 | Temp/Net Quantity Flag | 80 M | 1 N | A flag which indicates which type of data has been entered. A setting of "0" implies Temp/Gravity and "1" indicates net quantity. Only option 1 will be allowed until the version bridge is eliminated. |
|    | Total Record Length    |      | 80  |                                                                                                                                                                                                         |

### Sub-Total (Type 4)

Ignore temperature/gravity type B records from the cumulative net quantity calculations for Sub-Total type 4 records. Include the gross quantity of temperature/gravity type B records in the cumulative gross quantity calculations for Sub-Total type 4 records.

|    | Field Name               | Cols           | Length | Description                                                                                                                                                                                                                   |
|----|--------------------------|----------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 43 | System                   | 1 <b>M</b>     | 1 AN   | Name of the system, P=PDXB.                                                                                                                                                                                                   |
| 44 | Version                  | 2-3 <b>M</b>   | 2 AN   | Numeric version of the system.<br>„01“ = version 1, 69 column old format<br>„02“ = version 2, 80 column old format<br>'03' = version 3, new A,B record format                                                                 |
| 45 | Record Type              | 4 <b>M</b>     | 1 AN   | A alpha-numeric code used to identify and separate different PDXB formats. (4 for Type 4 Records.)                                                                                                                            |
| 46 | Company Code             | 5-7 <b>M</b>   | 3 AN   | An alpha-numeric field used to identify the sending/receiving company. Sending companies input the receiver's code and receivers get sender's code. While the version bridge exists, only 2 character codes will be used.     |
| 47 | SPLC Code                | 8-16 <b>M</b>  | 9 N    | A numeric field used to identify the physical location of the terminal from which the product was withdrawn. If the preceding records were type B, use the same SPLC code. Enter a type 4 record every time the SPLC changes. |
| 48 | Record Count             | 17-22 <b>M</b> | 6 N    | A numeric unsigned field indicating the number of preceding BOL records (Type A + B + 4) including this record.                                                                                                               |
| 49 | Blank                    | 23-45 <b>M</b> | 23 AN  |                                                                                                                                                                                                                               |
| 50 | Gross Quantity Sub-Total | 46-55 <b>M</b> | 10 N   | Numeric field that is the sum of the Gross Gallons (preceding type B records). Last 2 positions are implied decimal points (ex. 1453 gallons would                                                                            |

|    |                        |        |      |                                                                                                                                                                                 |
|----|------------------------|--------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    |                        |        |      | be represented as 0000145300).                                                                                                                                                  |
| 51 | Gross Credit Sign      | 56 M   | 1AN  | If the Gross Quantity is negative, enter a minus „-“ sign. Leave blank if positive.                                                                                             |
| 52 | Net Quantity Sub-Total | 57-66M | 10 N | Numeric field that is the sum of the Net Gallons (preceding type B records). Last 2 positions are implied decimal points (ex. 1453 gallons would be represented as 0000145300). |
| 53 | Net Credit Sign        | 67 M   | 1AN  | If the Net Quantity is negative, enter a minus „-“ sign. Leave blank if positive.                                                                                               |
| 54 | Blank                  | 68-80M | 13AN |                                                                                                                                                                                 |
|    | Total Record Length    |        | 80   |                                                                                                                                                                                 |

### Total Transmission (Type 5 and Type 6)

Ignore temperature/gravity type B records from the cumulative net quantity calculations for Total type 5/6 records. Include the gross quantity of temperature/gravity type B records in the cumulative gross quantity calculations for Total type 5/6 records.

| Ref # | Field Name                 | Cols   | Length | Description                                                                                                                                                                              |
|-------|----------------------------|--------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 55    | System                     | 1 M    | 1 AN   | Name of the system, P=PDXB.                                                                                                                                                              |
| 56    | Version                    | 2-3 M  | 2 AN   | Numeric version of the system.<br>„01“ = version 1, 69 column old format<br>„02“ = version 2, 80 column old format<br>'03' = version 3, new A,B record format                            |
| 57    | Record Type                | 4 M    | 1 AN   | A alpha-numeric code used to identify and separate different PDXB formats. (5 for Type 5 Records.) Type 5 is used for files being sent. Type 6 is generated for files being received.    |
| 58    | Blank                      | 5-21 M | 17 AN  |                                                                                                                                                                                          |
| 59    | Grand Total                | 22-27M | 6 N    | Numeric field containing the count of all preceding records.                                                                                                                             |
| 60    | Blank                      | 28-45M | 18 AN  |                                                                                                                                                                                          |
| 61    | Grand Total Gross Quantity | 46-55M | 10 N   | Numeric field that is the sum of the Gross Quantity for the preceding type B records. Last 2 positions are implied decimal points (ex. 1453 gallons would be represented as 0000145300). |
| 62    | Gross Credit Sign          | 56 M   | 1 AN   | If the Gross Quantity is negative, enter a minus „-“ sign. Leave blank if positive.                                                                                                      |
| 63    | Grand Total Net Quantity   | 57-66M | 10 N   | Numeric field that is the sum of the Net Quantity for the preceding type B records. Last 2 positions are implied decimal points (ex. 1453 gallons would be represented as 0000145300).   |
| 64    | Net Credit Sign            | 67 M   | 1 AN   | If the Net Quantity is negative,                                                                                                                                                         |

|    |                     |       |      |                                                  |
|----|---------------------|-------|------|--------------------------------------------------|
|    |                     |       |      | enter a minus '-' sign. Leave blank if positive. |
| 65 | Blank               | 68-80 | 13AN |                                                  |
|    | Total Record Length |       | 80   |                                                  |

## Recommended Editing

If mandatory fields are left blank, data should be rejected. When data is rejected for a blank mandatory field, totals not matching PDXB calculated totals, or missing record types, the entire transaction file should be rejected. Data should NOT be distributed until the entire transaction file has passed edit validation.

## Type A Record:

| Field Name                 | Cols     | Length | Edits                                                                                                                 |
|----------------------------|----------|--------|-----------------------------------------------------------------------------------------------------------------------|
| System                     | 1 M      | 1      | Equal to 'P'                                                                                                          |
| Version                    | 2-3 M    | 2      | Not less than '01' and not greater than '03'                                                                          |
| Record Type                | 4 M      | 1      | Equal to 'A'                                                                                                          |
| Company Code               | 5-7 M    | 3      | Left justify and validate against Company Code Database. Program will flip sender/receiver codes.                     |
| SPLC Code                  | 8-16 M   | 9      | Each position must be equal to 0-9 and not blank.                                                                     |
| TERMINAL<br>CONTROL NUMBER | 17-25 M  | 9      | No blanks. Each position must be equal to 0-9 and/or A-Z. Allow 000000000 to represent unknown.                       |
| BOL Number                 | 26-41 M  | 16     | Each position must be equal to 0-9 and/or A-Z and/or leading, trailing or embedded blanks. Will not accept 16 blanks. |
| Blank                      | 42-49 M  | 8      |                                                                                                                       |
| Start Load Date            | 50-57 M  | 8      | Valid date less than or equal to today, Year > 1995                                                                   |
| Start Load Time            | 58-61 M  | 4      | Hour 00-23, Minute 00-59                                                                                              |
| End Load Date              | 62-69 M  | 8      | Valid date less than or equal to today, Year > 1995<br>And greater than or equal to start of load date.               |
| End Load Time              | 70-73 M  | 4      | Hour 00-23, Minute 00-59; greater than or equal to start of load date and time.                                       |
| Consignee Number           | 74-87 M  | 14     | Each position must be equal to 0-9 and/or A-Z and/or leading, trailing or embedded blanks. Will not accept 14 blanks. |
| Destination State Code     | 88-89 M  | 2      | Each position must be equal to 0-9, No Blanks                                                                         |
| Destination County<br>Code | 90-92 M  | 3      | Each position must be equal to 0-9, No Blanks                                                                         |
| Destination City Code      | 93-97 M  | 5      | Each position must be equal to 0-9, No Blanks                                                                         |
| Carrier Code               | 98-101 M | 4      | Each position must be equal to A-Z. Will not accept 4 blanks.                                                         |

|                       |                  |            |                                                                                       |
|-----------------------|------------------|------------|---------------------------------------------------------------------------------------|
| Carrier FEIN          | 102-111 <b>M</b> | 10         | Must equal 0-9 in first nine places, F, S or U in 10 <sup>th</sup> position           |
| Vehicle Number        | 112-121 <b>O</b> | 10         | Each position must be to 0-9, A-Z or blanks                                           |
| Vehicle Type          | 122 <b>M</b>     | 1          | Must be equal to 'B', 'D', 'P', 'R', 'S', 'T', or 'X'                                 |
| Third Party           | 123-125 <b>O</b> | 3          | Left justify and validate against Company Code Database.                              |
| Purchase Order Number | 126-155 <b>O</b> | 30         | Each position must be equal to 0-9, A-Z or blanks                                     |
| Release Number        | 156-165 <b>O</b> | 10         | Each position must be equal to 0-9 or blanks                                          |
| Split Load Flag       | 166 <b>O</b>     | 1          | Must be equal to 'Y' or '-'                                                           |
| Time Zone             | 167-169 <b>M</b> | 3          | The first two positions must be equal to 0-9. The last position must be blank or '-'. |
| Shipper Info          | 170-179 <b>O</b> | 10         | No Edit                                                                               |

**PDXB - Version 3**  
**Mapping From Old To New Record**  
**NEW = NEW VERSION, OLD = OLD VERSION.**

**Type 1 Record:**

| Field Name       | Cols  | Length | Description                                                                                                                                                   |
|------------------|-------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Record Type      | 1     | 1      | No mapping. For each old type 1, a new type A will be created and for each product, a type B will be created.                                                 |
| Company Code     | 2-3   | 2      | Copy 2-3 to columns 5-6 new A & 5-6 new B. Leave column 7 blank in new A and new B.                                                                           |
| SPLC Code        | 4-9   | 6      | Copy 4-9 to columns 8-13 new A & 8-13 new B. Put 000 in columns 14-16 new A and new B.                                                                        |
| BOL Number       | 10-18 | 9      | Copy columns 10-18 to columns 33-41 new A & 33-41 new B. Fill columns 26-32 in both new A & B with zeroes.                                                    |
| Product Code     | 19-21 | 3      | Copy columns 19-21 to both the component (cols. 50-52) and finished (cols. 53-55) product fields in the new B.                                                |
| Shipping Date    | 22-27 | 6      | Copy to both date fields (cols. 50-57 & 62-69) in the new A record. Use 87 logic to convert to a four digit year (YY<87 then century = 20 else century = 19). |
| Consignee Number | 28-39 | 12     | Copy 28-39 to columns 74-85 new A. Leave columns 86-87 in new A blank.                                                                                        |
| Third Party      | 40-41 | 2      | Copy 40-41 to columns 122-123 new A, leaving 124 in new A blank.                                                                                              |
| Carrier Code     | 42-45 | 4      | Copy 42-45 to columns 97-100 new A.                                                                                                                           |
| Gross Gallons    | 46-53 | 8      | Copy 46-53 to columns 56-63 new B. Insert 00 in 64-65 new B.                                                                                                  |
| Net Gallons      | 54-61 | 8      | Copy 54-61 to columns 67-74 new B. Insert 00 in 75-76 new B.                                                                                                  |
| Credit Indicator | 62    | 1      | If 62 = 0, no mapping.<br>If 62 = 1, insert a minus sign (-) in columns 66 and 77 of new B.                                                                   |

|                               |       |   |                                                                                                    |
|-------------------------------|-------|---|----------------------------------------------------------------------------------------------------|
| Blend or Alteration Indicator | 63    | 1 | Copy 63 to column 78 in new B.                                                                     |
| Vehicle Number                | 64-69 | 6 | Copy 64-69 to columns 111-116 in new A. Insert zeroes in columns 117-120 of new A.                 |
| Hour of Load                  | 70-73 | 4 | Copy 70-73 to both the Start Load Time (cols. 58-61) and the End Load Time (cols. 70-73) of new A. |
| Percent Oxygenate by Weight   | 74-76 | 3 | No mapping.                                                                                        |
| Blank                         | 77-78 | 2 | No mapping.                                                                                        |
| Third Party Flag              | 79    | 1 | No mapping.                                                                                        |
| Continuation Flag             | 80    | 1 | No mapping.                                                                                        |

**PDXB - Version 3**  
**Mapping From New To Old Record**  
**NEW = NEW VERSION, OLD = OLD VERSION.**

**Type A Record:**

| Field Name              | Cols           | Length | Description                                                                                                                                |
