

# 2018 PIDX US SPRING CONFERENCE

Lisa Rotunno & Paul Lichter  
Date: April 3, 2018

## Effectively Managing Terminal Data Through the Use of Standards

# Agenda

- 1 Terminal Data Projects**
- 2 Terminal Master Data**
- 3 Terminal Inventory**

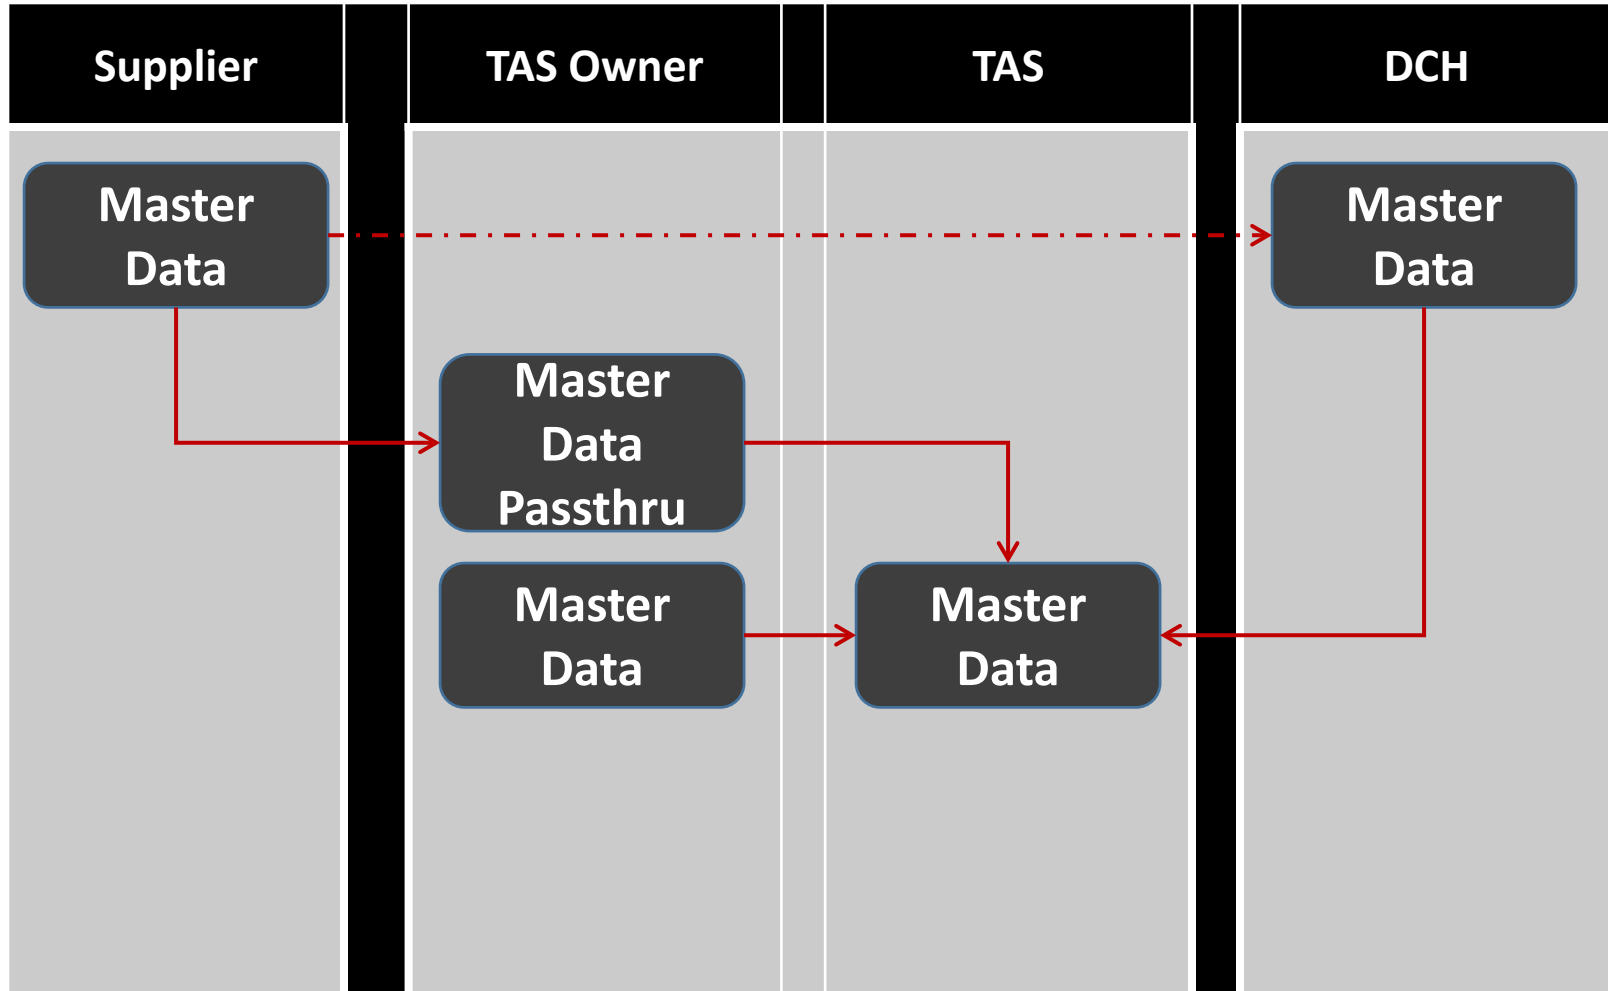

# Terminal Data Projects

# Terminal Master Data

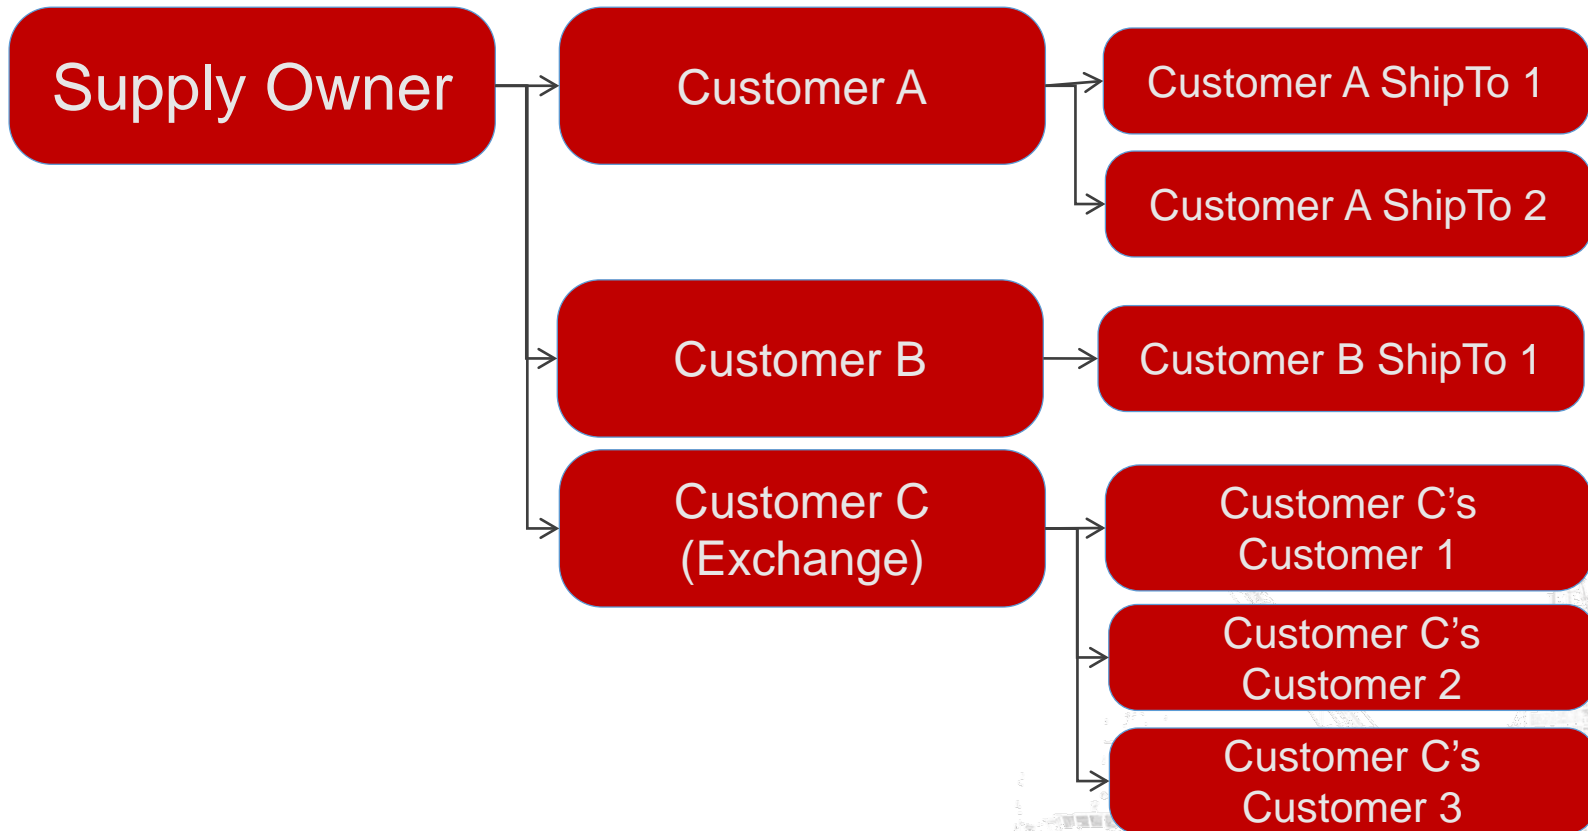

# TERMINAL MASTER DATA

# TERMINAL ACCOUNT RELATIONSHIP EXAMPLE

❖ Shows typical setup at a terminal

Provide the industry with a standard to transmit data sets that include:

- ❖ Customers
- ❖ Partners
- ❖ Products
- ❖ Carrier/haulier
  - Drivers
  - Equipment

- ❖ Current processes are manual and error prone
- ❖ Remove dependency on terminal personnel
- ❖ Reduce delays in propagating information increase accuracy, and customer satisfaction
- ❖ Allow interoperability across various lifting control and terminal automation systems

- ❖ The intended scope of this project is within the downstream industry, specifically servicing the bulk fuels terminals and related businesses.
- ❖ Data elements within scope:
  - PIDX Company Code & Product Code
  - Supplier Data (Who is supplying the material?)
  - Bill To / Sold To (Who is paying the bill)
  - Ship To/Load ID (Customer reference)
  - Driver/Carrier Information

# Terminal Inventory

# PURPOSE

- ❖ Provide the industry with an updated standard to gather and collect inventory data from all supply partners in a standardized format.

- ❖ The intended scope of this project is within the downstream industry, specifically servicing the bulk fuels terminals and related businesses.
- ❖ Data elements within scope:
  - Inventory Balances
  - Truck Receipts/Deliveries
  - Terminal Bulk Receipts/Deliveries
  - Rebrands
  - Transfers In/Out
  - End of Day BOL Summaries
  - Mid-Day Truck Liftings

# USERS OF THE DATA

- ❖ Accounting Departments
- ❖ Marketing Departments
- ❖ Schedulers
- ❖ Traders
- ❖ IT Staff
- ❖ Sales Departments
- ❖ Senior Management

- ❖ Allows multiple departments across an organization to obtain inventory data from one source of truth.
- ❖ Remove dependency on terminal personnel
- ❖ Reduce delays in propagating information increase accuracy, and customer satisfaction
- ❖ Allow interoperability across various lifting control and terminal automation systems

# OTHER BENEFITS

- ❖ Near real time inventory updates
- ❖ Anticipate run-out and storage capacity constraints
- ❖ Avoid reactionary spot purchase or sales
- ❖ Avoid discounted rack pricing
- ❖ Minimize demurrage situations

# TO BE CONSIDERED

- ❖ Terminal operators will not allow outside systems to initiate communications to the terminals.
- ❖ Protocols and processes must allow the terminal to initiate communications out to an ERP or DCH.
- ❖ Guidelines should be included as to frequency, authentication, transport protocols, etc.
- ❖ A validation step should be provided ensuring that all required elements are provided.
- ❖ Approval or acceptance of data
- ❖ A reconciliation process should be created for verification of the source and target data sources.

# CRITERIA FOR SUCCESS

- ❖ This project will require the cooperation of:
  - suppliers
  - terminal automation vendors
  - lifting control systems
  - terminal operators
- ❖ In order to be successful, the various parties involved will need to adopt the resulting standards to take advantage of the efficiencies and accuracy improvements made possible by these projects.

QUESTIONS?

The place to go for  
oil and gas e-business standards

THANK YOU
